

OUR SUSTAINABLE TOURISM POLICY

As Maya Bistro Hotel Beach,

With an awareness of our responsibilities towards the environment, our employees and the society, striving for continuous improvement, and incorporating and believing in sustainable elements in our activities,

We are committed to

Implementing a long-term sustainability management system by making continuous improvements,

Following local, national and international legal regulations and legislation that we are bound by,

Sharing our activities and performance covered by our sustainability policy with our employees, guests, suppliers and other stakeholders,

Ensuring that our employees are provided with periodic trainings to increase their understanding about their roles and responsibilities in developing and implementing the sustainable management system,

Investigating how the service we provide meets the wishes, expectations and needs of our guests, and ensuring that appropriate services are planned and provided accordingly,

Providing information and access to people in need when necessary,

Working with local and fair trade suppliers and increasing the number of local product groups in our procurement process, provided that they are healthy, environmentally friendly and compatible with human rights, and that the products and materials are available and of sufficient quality,

Reflecting authentic elements of the traditional and contemporary local culture in our operations, design, decoration, cuisine and other areas, while respecting the intellectual property rights of local communities,

Prioritizing environmentally sustainable suppliers and preferring environmentally friendly products and materials in our procurement process, as clearly stated in our procurement policy,

Measuring our carbon footprint, and working towards reducing it at all times by setting targets,

In order to minimize the amount of waste generated, preferring reusable, returnable and recycled goods in our procurement process, carefully monitoring and managing the purchase and use of consumable and disposable products including food, and favoring bulk purchases in order to avoid unnecessary packaging,

Measuring energy and water consumption by type and working to minimize total consumption,

Effectively treating and utilizing wastewater in-house, including greywater,

Measuring the amount of waste periodically, taking care not to exceed the previous amount, and ensuring recycling by sorting according to the type of waste,

And in carrying out all of these activities, avoiding any negative impact on the local population or the environment...
